WHAT I OWN & SHIP

Full-stack product delivery

- › Build features across frontend (UI, state, components) and backend (APIs, services)
- › Design and change database schemas as the product evolves
- › Ship features driven directly by what real schools ask for

Releases & production

- › Own git workflows, deployments, and release process
- › Debug live production issues, including incidents during active school usage
- › Support QA and testing through the release cycle

Product & operations

- › Write PRDs and contribute to product design decisions
- › Manage work in Jira; help shape roadmap from customer feedback
- › Implement feature gating, subscription-driven UX, and SaaS business logic
- › Contribute to branding and product naming decisions

Engineering discipline

- › Work through rigorous PR reviews with engineers of 10–14 years experience
- › Apply architecture thinking, tradeoffs, and maintainability to real systems
- › Build with AI tools (Gemini, Claude) in the loop, always under senior review

EXPERIENCE

Aug 2025 – present	Software Engineer Maahita Technologies Full-time. Owning end-to-end delivery on the school ERP — engineering, releases, product, and production support.
Jan 2024 – Aug 2025	Software Engineer Intern Maahita Technologies Joined in my 4th year of BTech. Started shipping production code on a live SaaS product from day one, mentored through PR reviews by senior engineers.

EDUCATION

2020 – 2024	BTech, Computer Science Gold medalist. Graduated top of program.
